Patent No. 6333153

GENERAL INFORMATION:

APPLICANT: FISHEL, Richard

APPLICANT: GRADIA, Scott

APPLICANT: GRADIA, Scott

TILE OF INVENTION: COMPOSITIONS, KITS, AND METHODS FOR EFFEC

TILE OF INVENTION: WCLEOTIDE MODULATION OF DNA MISMATCH REC

TILE OF INVENTION: PROTEINS

FILE REFERENCE: 9855-601

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an Oncorhynchus mykiss somatostatin polypepti containing a portion of preprosomatostatin I (PPSS-II). The protein sequences and their associated polynucleotides are useful for identifying modified somatostatin polypeptide which functions as a somatostatin agonist use for research, therapeutics or diagnostics, including medical and veterinary applications. The wild-type somatostatin and its modified version are useful for treating hypersecretion from endocrine tumours the pituitary (e.g. acromegaly) or gastroenteropancreatic tissues (e.g gastrinoma, glucagonoma, carcinoid syndrome), to cause tumour shrinkag through their effects on cell proliferation and apoptosis and as adjunin the treatment of diabetes mellitus via inhibition of growth hormone
                                                                                                                       disorder;
                                                                                                                                              neuroprotective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  II' protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 200
N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                 Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an Oncorhynchus mykiss somatostatin polypeptide containing a portion of preprosomatostatin I (PPSS-I) and/or a portion of preprosomatostatin I (PPSS-II). The protein sequences and their associated polynucleotides are useful for identifying modified for research, therapeutics or diagnostics, including medical and veterinary applications. The wild-type somatostatin and its modified version are useful for treating hypersecretion from endocrine tumours in the pituitary (e.g. acromegaly) or gastroenteropancreatic tissues (e.g. through their effects on cell proliferation and apoptosis and as adjuncts in the treatment of diabetes mellitus via inhibition of growth hormone and glucagon. In addition, dysfunctional somatostatin secretion is associated with acquired immunodeficiency syndrome (AIDS) and various neurological disorders (e.g. epilepsy, Alzheimer's disease and Huntington's disease) and somatostatin antagonists are effective in the treatment of such conditions. Nucleic acids encoding the polypeptides are useful in gene therapy and fusion peptides can be targeted to neoplasms and their metastases, inhibiting the release of their secretory products. This sequence represents O. Mykiss PPSS-II'' protein.

for research, therapeutics or diagnostics, including medical and veterinary applications. The wild-type somatostatin and its modified version are useful for treating hypersecretion from endocrine tumours in the pituitary (e.g. acromegaly) or gastroenteropancreatic tissues (e.g. gastrinoma, glucagonoma, carcinoid syndrome), to cause tumour shrinkage through their effects on cell proliferation and apoptosis and as adjuncts in the treatment of diabetes mellitus via inhibition of growth hormone
                                                                              as a somatostatin agonist useful
                                                                                                                                                                                                                                                                                                                                                                  secretory products

                                                                                                                                                                                                             드
different tissues. EST sequences usually correspond mai untranslated region (UTR) of the mRNA because they are from oligo-dT primed cDNA libraries. Such ESTs are not isolating cDNA sequences derived from the 5' ends of mR those cases where longer cDNA sequences have been obtainthose cases where longer cDNA sequences have been obtainthose cases where longer cDNA sequences have been obtain UTR is rarely included. 5' ESTs are derived from mRNAs ends and can therefore be used to obtain full length cD DNAs. 5' ESTs are also used in diagnostic, forensic, ge chromosome mapping procedures. They are used to obtain regulatory sequences and to design expression and secre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisationly polymerase chain reaction (PCR) primers, oligomers, and and gene mapping, and in recombinant production of (II) polynucleotides are also used in diagnostics as expresse for identifying expressed genes. (I) is useful in gene to restore normal activity of (II) or to treat disease (II). (II) is useful for generating antibodies against guantitating a polypeptide in tissue, as molecular weigh

The sequence represents an angiotensin converting enzyme spl (ACEV) polypeptide. The polypeptides of the invention includ granulocyte colony stimulating factor receptor, glucagon, in platelet-derived endothelial cell growth factor, cyclin-depending inhibitor IC, cellular tumour antigen P53, and vasoactive in polypeptide receptor 2. The polypeptides and their associate acids are useful for identification of variant sequences and candidate compounds capable of binding the molecules. The set the invention can be used in the treatment and diagnosis of disorders including cardiovascular diseases such as arterios myocardial infarction and coronary arterial thrombosis, rena such as diabetic nephropathy, muscular diseases such as hype immune disorders such as immune complex nephritis, multiple cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous das asbestosis and vascular pathologies involving an endothel

                                                                                                                                                                                  example,
                                                                                                                                                                                                                                     rectly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding a range of human polypeptides, useful vaccination, testing and therapy -
P. acnes is also involved in infections of bone, joints and nervous system, however it is particularly involved in the lilesions associated with acne vulgaris. A method for detecting presence or absence of P. acnes in a patient comprises contagample with a binding agent that binds to the proteins of the and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of an specific for P. acnes proteins. These antibodies can be used downregulate expression and activity of P. acnes polypeptides therefore treat P. acnes infections. The antibodies may also diagnostic agents for determining P. acnes presence, for example and inked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of specification, but was obtained in electronic format directly at ftp.wipo.int/pub/published_pot_sequences.

The present sequence is a protein en probe. The probes may be used for predicting, measuring gene expression in samples derived from the human heart By measuring gene expression, the probes are useful for diagnosing, grading, staging, monitoring and prognosing human heart and vascular system e.g. cardiovascular dise hypertension, cardiac arrhythmias and congenital heart disconting the sequence data for this patent did not form par specification, but was obtained in electronic format dir at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of single exon nucly probes which are derived from genomic sequences expressed in bone marrow. They can be used to measure gene expression in samples, which may enable the improved diagnosis and treatment as lymphoma, leukaemia and myeloma. The present sequen protein encoded by one of the probes of the invention.

The present invention relates to single exon nucleic see AAI31315-AAI57546). The present sequence is a peps such probe. The probes are useful for producing a mich predicting, measuring and displaying gene expression from human placenta. The probes are useful for antenathuman genetic disorders.
                                                                                                                                                                                                                                                    probes
                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid analyzing gene expression in human placenta -
                                                                                                                                                                                                                                                                                   SEQ ID No 36852; 654pp; English.

Patent No. 6380370
GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-007
CURRENT APPLICATION NUMBER: US/09/134,001C
                                                                                                                                                                                                                                   APEUTICS

Phosphopyruvate hydratase (EC 4.2.1.11) alpha - duck
N;Alternate names: enolase alpha; tau-crystallin
C;Species: Anas platyrhynchos (domestic duck)
C;Date: 21-May-1990 #sequence_revision 21-May-1990 #text_change 21-Jul-2000
C;Accession: A32132
R;Wistow, G.J.; Lietman, T.; Williams, L.A.; Stapel, S.O.; de Jong, W.W.; Horwitz, J.; E
J. Cell Biol. 107, 2729-2736, 1988
A;Title: Tau-crystallin/alpha-enolase: one gene encodes both an enzyme and a lens struct
A;Reference number: A92750; MUID:89079778; PMID:2462567

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an Oncorhynchus mykiss somatostatin poly containing a portion of preprosomatostatin I (PPSS-I) and/or a preprosomatostatin I (PPSS-II). The protein sequences and their associated polynucleotides are useful for identifying medified comatostatin polypeptide which functions as a somatostatin agonis for research, therapeutics or diagnostics, including medical and veterinary applications. The wild-type somatostatin and its modification are useful for treating hypersecretion from endocrine tum the plunitary (e.g. acromegaly) or gastroenteropancreatic tissues gastrinoma, glucagonoma, carcinoid syndrome), to cause tumour shr through their effects on cell proliferation and apoptosis and as in the treatment of diabetes mellitus via inhibition of growth he associated with acquired immunodeficiency syndrome (AIDS) and verneurological disorders (e.g. epilepsy, Alzheimer's disease and Huntington's disease) and somatostatin antagonists are effective treatment of such conditions. Nucleic acids encoding the polypept cuseful in gene therapy and fusion peptides can be targeted to neouseful in gene therapy and fusion peptides can be targeted to neouseful in gene therapy and fusion peptides can be targeted to neouseful in gene therapy and fusion peptides can be targeted to neouseful associated with sequence represents 0. Mykiss PPSS-II'' protein.

This sequence represents 0. Mykiss PPSS-II' protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The invention relates to an Oncorhynchus mykiss somatostatin polypeptide containing a portion of preprosomatostatin I (PPSS-I) and/or a portion of preprosomatostatin II (PPSS-II). The protein sequences and their associated polynucleotides are useful for identifying modified somatostatin polypeptide which functions as a somatostatin agonist useful for research, therapeutics or diagnostics, including medical and veterinary applications. The wild-type somatostatin and its modified version are useful for treating hypersecretion from endocrine tumours in the pituitary (e.g. acromegaly) or gastroenteropancreatic tissues (e.g. gastrinoma, glucagonoma, carcinoid syndrome), to cause tumour shrinkage through their effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              eptides are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an Oncorhynchus mykiss somatostaticontaining a portion of preprosomatostatin I (PPSS-I) and/copreprosomatostatin II (PPSS-II). The protein sequences and associated polynucleotides are useful for identifying modification polypeptide which functions as a somatostatin for research, therapeutics or diagnostics, including medicator research, therapeutics or diagnostics, including medicator research applications. The wild-type somatostatin and its version are useful for treating hypersecretion from endocri

che pitulitary (e.g. acromegaly) or gastroenteropancreatic tissues (e.g. gastrinoma, glucagonoma, carcinoid syndrome), to cause tumour shrinkage through their effects on cell proliferation and apoptosis and as adjuncts in the treatment of diabetes mellitus via inhibition of growth hormone and glucagon. In addition, dysfunctional somatostatin secretion is associated with acquired immunodeficiency syndrome (AIDS) and various neurological disorders (e.g. epilepsy, Alzheimer's disease and Huntington's disease) and somatostatin antagonists are effective in the treatment of such conditions. Nucleic acids encoding the polypeptides are useful in gene therapy and fusion peptides can be targeted to neoplasms and their metastases, inhibiting the release of their secretory products. This sequence represents O. Mykiss PPSS-I protein.

Note: The features for this sequence are specifically claimed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the wild type human enolase (NSE) protein. The primers represented by AAT60282-T60285 were used to amplify tyrosine introduced versions of this sequence. The introduced tyrosine residues combine a radioisotope in such a way as to have no substantial effect or the antigenicity of the protein. The peptides with the introduced tyrosine residue has been introduced via an insertion or substitution into the wild type sequence. The peptides can then he means in radioimmunoscent
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Introducing tyrosine residues into a protein for radioisotopic labelling - by substitution, addition and/or insertion to a DNA coding for the protein, antigenicity of the protein is unchanged by labelling
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expressing a recombinant DNA seque

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to compositions and methodetection, diagnosis and therapy of haematological malignessent sequence is the protein sequence of a human haemalignancy related antigen. The methods of the present detecting the presence of haematological malignancy related sample obtained from the patient (an increased level polypeptide, compared to an unaffected individual, is in increased risk). Haematological malignancies which can the present invention are chronic lymphocytic leukaemia, follicular lymphoma, Hodgkin's lymphoma, non-Hodgkin's lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      level

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; anticonvulsant; antiarthritic; immunosuppressant; cardiant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antithflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithflammatory; antibacterial; antiviral; antifungal; antitheumatic; cantinflammatory; antibacterial; antiviral; antifungal; antitheumatic; cantitheoremic of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus

The invention relates to gene sequences (ABI99915-ABI99934) having modified expression in fetal heart tissue as compared to adult heart tissue and the encoded proteins (ABB57375-ABB57392). The genes have cardiant activity and may be useful in the promotion of the repair of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          screening potential compounds for the ability to inted with myocardial necrosis. Drugs identified by tods may be used to treat and prevent disease with whose is associated, such as cardiac hypertrophy and ciency. Diagnosis of diseases such as those above.
                                                                                                                                                                                                                                                                                      in fetal and adult heart

The presence and quantities of total be detected using 2D gel electrophoresis comparison of The proteins can be used as biochemical markers to detect the endometrium and can be measured in body fluids, obviation endometrial biopsies.

The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered to a wild-type or reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      An isolated or recombinant polynucleotide used to
 in signal transduction after ligand binding expressed in human placenta, bone marrow, t kidney cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chemical;
                                                                                                                                                                                                                                                                                                                                          AAU93172 standard; Protein; 472

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequences given in AAB47761-69 show novel G-protein coupled receptor (NGPCR) polypeptides. The NGPCR coding sequences are found chromosome 3 at 3q11.1 in the human genome. These NGPCR proteins sho the presence of 7 conserved transmembrane domains which are involved interconnected by non-conserved hydrophilic loops. They are involved

                                                                                                                              AAY34584-Y35879 represent the proteins encoded by all the of frames in the complete genome (see AAX91990) of Chlamydia p C. pneumoniae causes respiratory disease such as pneumoniae bronchitis and is thought to be a contributing factor in he disease, sarcoidosis, sinusitis, purulent otitis media, ery nodosum or pharyngitis. The polypeptides encoded by the operframes of the C. pneumoniae genome (see AAY34584-Y35879) calmmunogenic compositions as vaccines. Vectors containing C. nucleotides sequences can also be used as immunogenic compoespecially where the vector directs the expression of a neuepitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels

exhibits ectopic expression or altered expression of one o associated with a plant trait as compared to a wild plant. are a transgenic plant comprising the polynucleotides, a creadable medium having stored sequence information, and id homologue sequence from a database comprising a plurality sequences comprising inputting sequence information select 464 fully defined sequences given in the specification. The recombinant polynucleotide is used for producing a plant hamodified trait, the method comprising selecting a plant hamodified trait, the method comprising selecting a polynucleotide or antisense nucleic acid into an expression introducing the vector into a plant or a cell of a plant the polypeptide or antisense nucleic acid, thereby product plant, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic pest tolerance, environmental stress response (e.g. drough disease resistance, herbicide resistance, seed and fruit y rate, leaf and flower senescence and many other traits lis specification). The present sequence is one of the 232 pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Agriculture; metabolic chemical; environmental stress; microbial disease resistance; herbicide resistance; see fruit yield; growth rate; leaf senescence; flower senes plant; transcription factor; transgenic.

Novel isolated G-protein coupled receptor polypeptid identifying compounds that modulate the protein exprwhich are used to treat a variety of physiological o

Claim 6; Page 77; 85pp; English.

The sequences given in AAB47761-69 show novel G-protein receptor (NGPCR) polypeptides. The NGPCR coding sequence chromosome 3 at 3q11.1 in the human genome. These NGPCR the presence of 7 conserved transmembrane domains which interconnected by non-conserved hydrophilic loops. They in signal transduction after ligand binding. These NGPC expressed in human placenta, bone marrow, trachea, testikidney cells.
